ABOUT THE 311 INSTITUTE

The 311 Institute, a London-based global leader in Futures, Deep Futures and Dynastic Futures advisory, exists to serve and help leaders anticipate, explore and shape every future.

History has repeatedly shown that organisations are made or broken by disruption — made by the shifts they saw and acted on in time, and broken by those they missed, misunderstood or met too late.

The VUCA-MAX world runs on accelerating, complex change — hard to anticipate, harder to answer. Almost half the world's CEOs believe their companies will not be economically viable within a decade without reinvention. That widening gap — seeing the future, understanding it, acting in time — is the one we exist to close.

With a track record of trust and excellence built advising the world's largest organisations, we close that gap in a way no one else can. Where others offer opinion we offer a record, where others see slices of the future we see the whole horizon, and where others offer partial solutions we offer everything.

Used by the world's most consequential organisations — among them Walmart, the world's largest employer, alongside ABB, Accenture, Adidas, Allianz, AON, ARM, AT&T, Auchan, BCG, BlackRock, Citigroup, Coca-Cola, DP World, Emirates Airlines, EY, the FAA, Google, HP, Huawei, KPMG, LGT, Nokia, Novartis, PepsiCo, PwC, Roche, RWE, Samsung, Siemens AG, Standard Chartered, T-Mobile, UBS, Visa, Workday, Worldpay and the United Nations, together with royal households and G7, G20 and G77 leaders. We advise boards, governments and investors across every industry and at every scale, helping countries grow and enterprises become Centennial companies built to endure beyond a hundred years.

In a world that punishes the unprepared, the gap between seeing the future and shaping it is all too often the one that determines who thrives and survives, and who doesn't. We close that gap.

ABOUT THE AUTHOR

**Matthew Griffin**

Founder & Futurist in Chief · 311 Institute, London

Matthew Griffin is a multi-award-winning futurist and expert in disruption and innovation, geopolitics, leadership and technology, described as a "walking encyclopaedia of the future" and a "futurist polymath." A 15-time best-selling author of the "Codex of the Future" series, he is the Founder and Futurist in Chief of the 311 Institute — a global Futures and Deep Futures advisory firm working with royal households, world leaders, G7, G20 and G77 governments, NGOs and multinational mid- and mega-cap firms to help them explore, shape and lead the next 50 years of business and society.

An award-winning YouTube creator with over a million followers and unrivalled global reach, Matthew is a highly sought-after international keynote speaker, lecturer and mentor. He collaborates with global leaders through the United Nations Alliance of Civilizations (UNAOC) and the United Nations General Assembly (UNGA) to shape initiatives such as the UN's AI for Humanity programme, the UN Conference of the Parties (COP) and the World Economic Forum in Davos.

As the former Global Head of Cloud, National Security and Enterprise Sales for companies including Atos, Dell-EMC and IBM, Matthew has a proven track record of building multi-billion-dollar business units and turning failing divisions into market leaders. His ability to identify, analyse and communicate the implications of hundreds of emerging technologies and trends is unparalleled, and his insights are trusted by many of the world's most respected organisations.

Regularly featured in the global media — including the AP, BBC, Bloomberg, CNBC, Discovery, Forbes, Khaleej Times, the Telegraph, TIME, ViacomCBS, WIRED and the WSJ — Matthew's mission is to help organisations create a fair and sustainable future whose benefits are shared by everyone, irrespective of ability, background or circumstance.

THE 311 INSTITUTE READ

IN BRIEF

This is the public scorecard for every forecast the 311 Institute locked between July and September 2026. It covers 960 questions in three rounds. Each round has its own chapter, with every question, our answer, what happened and the score.

THE OBVIOUS READ

A forecaster who publishes results will publish the good ones. A benchmark is marketing, and a falling score is something to bury.

THE FULLER PICTURE

The score that matters is the honest one. Our hit rate fell from 86.8% to 68.5% as we took hindsight out of the test. By Round 3 our probabilities were also the best calibrated of the three rounds. Both facts are shown here, call by call.

EXECUTIVE SUMMARY

Between July and September 2026 the 311 Institute locked 960 forecasts in three rounds. Each was sealed before its answer existed, then marked against a named public source once the answer was in. 896 calls could be scored, and 711 were right.

Round 1 scored 86.8% on 310 calls and Round 2 scored 80.6% on 335. Both rounds were written when part of the answer was already visible, so they flatter us. We treat them as tests of method rather than of foresight.

Round 3 was the first round written blind. It scored 68.5% on 251 calls, with a Brier score of 0.196. That is a skill score of 0.26 over a naive forecaster facing the same questions.

The confident calls held up in every round. In Round 3, events we called at 70% or more happened 43 times out of 45. Every call made at 90% or more was right. On head-to-head contests our pick won 46% of the time, against an average chance rate of 27%.

The weak points are clear too. Soft calls between 40% and 59% were right only 54% of the time in Round 3. Economic questions scored 52.7%, and questions about price levels scored lowest of any type.

Defective questions are a measured cost. Round 3 lost 48 of its 300 questions to defects, such as dates that did not exist and sources that could not be archived. Every new question now passes a coded defect check and a live check on the day it is locked.

Rounds 4, 5 and 6 are sealed and resolve on 31 October, 30 November and 31 December 2026. They measure how far ahead our forecasts stay useful, and they will be published here in the same detail.

01

PART ONE

WHY WE KEEP SCORE IN PUBLIC

01

2026

Why would a futurist publish every forecast, and every miss?

Foresight earns trust only when it can be checked. The benchmark is how we check ours, in public, one sealed call at a time.

SCOPE

Purpose

Method

Rounds

Lessons

Most predictions about the future are never checked. They are made, quoted and forgotten. Nobody counts the misses, so nobody learns from them. We decided our own foresight should be held to a harder standard.

Rounds

3 scored, 3 sealed

Questions

960 locked

THE PROBLEM WITH UNSCORED FORESIGHT

Forecasting has a measurement problem. A strategy deck says a market will triple by 2030. A keynote says a technology will go mainstream within five years. By the time the date arrives, the claim has been forgotten, and the person who made it has moved on.

The research on this is sobering. A long study of expert political forecasts found that many experts did little better than simple rules or chance.^[11] Their confidence was not a reliable guide to their accuracy. The experts who sounded most certain were often the least accurate.

The same research found a way out. When forecasters are asked precise questions, scored on the answers and given feedback, they improve.^[12] Scoring is not a vanity exercise. It is the mechanism by which judgement gets better.

Precise questions are the starting point. A claim such as “AI will transform finance” cannot be marked. A question such as “Will a named regulator publish a named rule by a named date?” can. Every question in this benchmark is written to the second standard.

Previously we asked

Who has the most compelling view of the future?

Now we ask

Whose view of the future has been right, and how often?

FOUR REASONS WE BENCHMARK

The 311 Institute advises boards, governments and investors on how technology and society will change. We run the benchmark for four reasons, and each one matters to the people who use our work.

- ① Accountability: clients should see our record before they rely on our judgement
- ② Learning: every miss shows us where our reasoning is weak
- ③ Calibration: a 70% call should come true about seven times in ten
- ④ Horizon: we need to know how far ahead our judgement stays useful

Accountability comes first. A forecaster who will not be scored is asking for trust without evidence. Publishing the full record, question by question, lets anyone audit our claims. It also commits us to keep publishing when the numbers are unflattering.

Learning is the reason the benchmark repeats. One round tells us very little. Several rounds, each marked and analysed, show which kinds of question we answer well and which we do not. Each round in this report ends with what it changed in how we work.

Calibration is the deeper test. A forecaster can score well by only answering easy questions. Calibration asks a sharper question: when we say 70%, does the event happen about 70% of the time? A well-calibrated forecaster can be trusted at every level of confidence, not just the extremes.

Horizon is the commercial question. Clients care about the next year and the next decade, not the next fortnight. Rounds 4, 5 and 6 are already sealed at six, ten and fourteen weeks out. They are the first step in measuring how fast our edge fades with distance.

WHY THE MISSES STAY IN

It would be easy to publish only the rounds that went well, or to drop the questions that went badly. We do neither. All 960 questions appear in this report, in the chapter of the round they belong to.

Where a question was defective, we say so and show it as void rather than removing it. Where a mark was changed by a second check, we show the original and the revised figure.

A benchmark that hides its misses cannot be believed when it reports a hit.

CHAPTER SUMMARY

Forecasts that are never scored cannot be trusted or improved. Research on expert judgement shows that confidence is a poor guide to accuracy, and that scoring with feedback is how forecasters get better. We lock every call before the answer exists, mark it against a public source and publish the result, hits and misses alike. The benchmark serves four ends: accountability, learning, calibration and horizon.

Foresight that is never checked is only opinion.

CHAPTER CLOSE

WHAT NEXT?

Why we keep score in public

QUESTIONS TO ASK

- 1 How often are the forecasts you rely on checked against what happened?
- 2 Would your own planning assumptions survive being locked and marked?
- 3 Which of your advisers publish their misses?

02

PART TWO

HOW EVERY FORECAST IS TESTED

02

2026

What stops a forecaster from marking their own homework?

Every call passes through the same four steps: lock, resolve, mark and score. Each step is built so that the result cannot be bent after the event.

SCOPE

Purpose

Method

Rounds

Lessons

A score is only as trustworthy as the process behind it. This chapter sets out exactly how a question becomes a scored call, so that a reader can challenge our method while trusting that the numbers are what they are.

Steps

Lock · Resolve ·
Mark · Score

Scores

Hit rate and Brier

Controls

Seal, voids, second
marker

FROM QUESTION TO SCORE

STEP ONE

Lock

Questions, probabilities and reasons are sealed with a hash.

STEP TWO

Resolve

Nothing is marked until the date passes and the source publishes.

STEP THREE

Mark

A marker records the real value, its source and the date read.

STEP FOUR

Score

Each call earns a hit or miss and a Brier score.

Lock. We write each question with a resolution date, a threshold and a named public source. We give it a probability and a one-line reason. The whole set is then sealed with a cryptographic hash, so any later change to a question or a probability would break the seal.

Resolve. We wait. Nothing is marked until the resolution date has passed and the named source has published its figure.

Mark. A marker finds the real value at the named source and records the value, the link and the date it was read. Where the named source is closed to us, as with paid data terminals, the marker uses a reputable public source for the same figure and notes it.

Score. Each resolved call earns two scores, a hit or a miss and a Brier score. Both are explained below.

WRITING A MARKABLE QUESTION

A good benchmark question has one correct answer that anyone can check. It names the source that will settle it, the exact threshold and the date. It must still be answerable after the event, which rules out sources that change or vanish.

Questions come in several forms. Most ask whether something will happen. Some ask whether a figure will be above a level. Others ask which of several named candidates will win, rank first or act first.

The three rounds at a glance

ROUND	LOCKED	RESOLVED	CALLS	CONDITIONS
Round 1	27 Jul 2026	31 Jul 2026	310 calls	Context-informed, about a period already under way
Round 2	7 Aug 2026	30 and 31 Aug 2026	350 calls	Context-informed, about the month ahead
Round 3	19 Sep 2026	30 Sep 2026	300 calls	Written blind for 288 of the 300 questions

Source: 311 Institute round packs, 2026.

I HOW A CALL IS SCORED

Most questions are yes or no. A probability of 50% or more is a call that the event will happen, and below 50% is a call that it will not. A hit means the outcome fell on the side we called. Range questions count as hits when the real value lands inside the band we locked.

The Brier score is the stricter measure.^[10] It is the squared gap between our probability and the outcome, counted as one if the event happened and zero if not. A perfect forecaster scores zero. A forecaster who says 50% on everything scores 0.25.

WORKED

1

Reading a Brier score

Suppose we give an event a 70% chance. If it happens, the gap is 0.3 and the score is 0.09. If it does not, the gap is 0.7 and the score is 0.49.

A confident miss costs more than five times as much as a confident hit earns. That is deliberate. It rewards forecasters who are sure only when they should be.

Round 3 added head-to-head questions, such as which of three stock indices rose most. For these we name our most likely winner and state its chance of winning. Where that chance is below 50%, the call on the record is that our pick will probably lose, and it is scored that way.

Because that rule can read oddly, we also report the plain test for contests. How often did our named pick actually win, compared with the chance of picking the winner blind?

SKILL AGAINST A NAIVE FORECASTER

A raw Brier score depends on how hard the questions were. To compare rounds fairly, we also report a skill score against a naive forecaster facing the same questions. The naive forecaster says 50% on every yes or no question and gives each contest pick its recorded chance rate.

A skill score of zero means no better than that naive forecaster. A score of 0.25 means a Brier score a quarter lower. Skill scores are the fairest way to compare one round with another.

VOID QUESTIONS AND MARKERS

Some questions turn out to be defective. A named chart date may not exist, a source may stop publishing, or a premise may be false. Scoring those would measure our question writing, not our foresight. We mark them void, record why and leave them out of every rate.

Each round is marked first by one marker who finds every answer. In Round 2 a second marker independently re-marked 27 calls and changed 5 of them.^[4] A full second marking of every round is still to be done, and we flag it as the main limit on this report.

BLIND AND CONTEXT-INFORMED ROUNDS

Rounds 1 and 2 were written close to, or inside, the periods they asked about. Some of the answer was already visible when the calls were locked. We call these context-informed rounds, and their scores are higher for it.

Round 3 was written blind. Of its 300 questions, 288 were about events with no visible answer when the set was sealed. It is the fairest test of our foresight so far, and the one we treat as the baseline.

CHAPTER SUMMARY

Every call passes the same four steps. It is sealed before the answer exists, resolved only when the source publishes, marked against a named public source and scored twice, as a hit or miss and with a Brier score. Defective questions are voided rather than scored, skill is measured against a naive forecaster and every round is labelled blind or context-informed. The method is published so it can be challenged.

Argue with the method, never with the numbers.

CHAPTER CLOSE

WHAT NEXT?

How every forecast is tested

QUESTIONS TO ASK

- 1 Is a question that cannot be marked fairly better scored or removed?
- 2 What would convince you a forecast was locked before the event?
- 3 Which matters more to you, a high hit rate or good calibration?

03

PART THREE

ROUND 1: THE JULY BASELINE

03

Jul 2026

Could a full forecasting round be locked, marked and scored end to end?

Round 1 put 310 calls through the whole process for the first time. It proved the method works. It also showed how much a round written with hindsight flatters the score.

SCOPE

Purpose

Method

Rounds

Lessons

Round 1 was the first time we put a full set of forecasts through every step, from sealed question to published score. Its job was to prove the process. Its results show both what worked and what a first round can hide.

Locked

27 Jul 2026

Resolved

ROUND 1 AT A GLANCE

86.8%

of 310 calls right

0.149

Brier score on 295 yes or no calls

106/116

calls made at 70% or more that were right

The round was locked on 27 July 2026 and resolved on 31 July. It was marked on 6 August by a single marker using public sources. Most questions asked whether something had happened, or would happen, between February and the end of July 2026.

That window matters. When the calls were locked, most of the period they asked about had already passed. Round 1 is therefore context-informed. Its score says more about how well we read a period already under way than about foresight.

HOW ROUND 1 WAS BUILT

The round had two tranches. The first held 50 detailed questions. The second held 260 shorter questions written in index style. Some questions appear in both tranches with different wording, and each was scored as locked.

Most calls were yes or no, with 295 of them. Six were range calls, which locked a band for a value such as an oil price on 31 July. Nine were spread calls, which split probability across several candidates, such as the world's most valuable company.

The questions covered markets and the economy, technology and AI, geopolitics, energy, science, health, sport and culture. Round 1 carried no topic tags, so its results cannot be broken down by subject from the question record.

Round 1 results by call type

CALL TYPE	WHAT IT LOCKED	CALLS	RIGHT	HIT RATE
Yes or no	A probability that an event happened	295 calls	262 of 295	88.8%
Range	A band for a value on a date	6 calls	1 of 6	16.7%
Spread	A probability split across candidates	9 calls	6 of 9	66.7%
Detailed tranche	The first set of questions	50 calls	39 of 50	78.0%
Index tranche	The second, shorter set	260 calls	230 of 260	88.5%

Source: 311 Institute Round 1 pack, 2026.

ROUND 1 SCORECARD

86.8%

of Round 1 calls were right

Round 1 scored 269 of 310, a hit rate of 86.8%.^[1] On the 295 yes or no calls the Brier score was 0.149, a skill score of 0.40 over a coin flip.

The round's scorecard of record also reports 75.0% on the questions with hard data sources, and names markets and macro as the weakest domain at 67%.^[2] That split lives in the scorecard rather than the question record, so we could not recompute it here.

Round 1: how often each level of confidence was right

SOURCE: 311 INSTITUTE ROUND 1 PACK, 2026.

HIT RATE BY CONFIDENCE (%)

FORECAST AGAINST OUTCOME (%)

In the right-hand chart, indigo bars show our average forecast in each band and cyan bars show the share of those events that happened.

Round 1 was right more often than it expected to be. Events we gave a 60–79% chance happened 82.6% of the time. Events we gave 20–39% happened only 7.3% of the time. We were pointing the right way but holding back, which is what a forecaster with partial sight of the answer tends to do.

The most confident calls were all right. All 43 calls made at 80% or more came true. Below that, the hit rate was flat at about 87% whether we were 55% or 75% sure. That flatness is a warning sign. In a well-calibrated record, accuracy rises with confidence.

Ranges were the weak spot. Only 1 of 6 range calls landed inside the band. A band for a market price on a single day is a hard target in a volatile month, and these calls cost more than their small number suggests.

Round 1: our forecasts against what happened

FORECAST THAT THE ANSWER IS YES	CALLS	OUR AVERAGE FORECAST	SHARE THAT HAPPENED
0–19%	34 calls	10.6%	0.0%
20–39%	82 calls	31.6%	7.3%
40–59%	87 calls	51.5%	57.5%
60–79%	86 calls	67.4%	82.6%
80–100%	6 calls	84.2%	100.0%

Source: 311 Institute Round 1 pack, 2026.

CALLS THAT STOOD OUT

The costliest misses were confident calls on politics, energy and the economy. The best hits were firm calls that widely discussed breakthroughs or ruptures had not happened.

Round 1: the five costliest misses

QUESTION AS LOCKED	OUR CALL	OUTCOME	BRIER
China Q2 2026 GDP growth reported at or above 4.5%?	YES (78%)	No	0.608
Any state formally left the International Criminal Court Feb-Jul 2026?	NO (78%)	Yes	0.608
Was the fed funds target upper bound above 4.00% on 31 Jul 2026?	YES (72%)	No	0.518
Did European TTF front-month gas settle above EUR 70/MWh at any point before 31 Jul 2026?	YES (72%)	No	0.518
Keir Starmer was UK PM on 31 Jul 2026?	YES (72%)	No	0.518

Source: 311 Institute Round 1 pack, 2026.

One miss carries a clear lesson. We gave 72% to Keir Starmer still being prime minister on 31 July. The marking record shows a new prime minister in office from 20 July, a week before the round was locked.^[9] The forecast rested on a fact that was already out of date.

Round 1: the five strongest hits

QUESTION AS LOCKED	OUR CALL	OUTCOME	BRIER
A quantum computer factored a number larger than RSA-1024 before 31 Jul 2026?	NO (99%)	No	0.000
Did a commercial fusion company export net electricity to a grid before 31 Jul 2026?	NO (97%)	No	0.001
China conducted a crewed lunar landing before 31 Jul 2026?	NO (97%)	No	0.001
Any EU member state began Article 50 withdrawal before 31 Jul 2026?	NO (96%)	No	0.002
Humans landed on the Moon before 31 Jul 2026?	NO (96%)	No	0.002

Source: 311 Institute Round 1 pack, 2026.

WHAT ROUND 1 TAUGHT US

- ① Check every premise live on the day a round is locked
- ② Write rounds blind so the score measures foresight, not hindsight
- ③ Tag every question by topic so results can be broken down
- ④ Remove duplicate questions before a round is sealed
- ⑤ Price ranges as probabilities or widen the bands

Each of these changes was carried into later rounds. The live premise check became a formal step at lock. Round 3 was the first round written blind, and every question since has carried a topic tag.

Round 1 proved the method works. It did not prove we can see the future.

CHAPTER SUMMARY

Round 1 scored 86.8% on 310 calls, with a Brier score of 0.149. It proved the process from lock to score. Every call made at 80% or more was right, but accuracy was flat below that and only 1 of 6 range calls landed. Its questions were partly answerable when written, so it measures method more than foresight. Its lessons, above all the live premise check, shaped every later round.

Round 1 proved the method, not the foresight.

CHAPTER CLOSE

WHAT NEXT?

Round 1: the July baseline

QUESTIONS TO ASK

- 1 How much of a forecast's accuracy comes from information already in hand?
- 2 Which of your own forecasts are really descriptions of the present?

04

PART FOUR

ROUND 2: THE AUGUST EXPANSION

04

Aug 2026

Did the method hold at a larger scale, with a second marker checking the work?

Round 2 grew to 350 calls across social, technological, economic, environmental and political questions and a wider benchmark set. It scored 80.6%, and a second marker tested the marking.

SCOPE

Purpose

Method

Rounds

Lessons

Round 2 was a test of scale. It more than doubled the topics covered and added a structured set of questions across five lenses: social, technological, economic, environmental and political.

Locked

7 Aug 2026

Resolved

30–31 Aug 2026

Marked

2 Sep 2026

ROUND 2 AT A GLANCE

80.6%

of 335 scored calls right

0.165

Brier score across the round

114/119

calls made at 70% or more that were right

The round was locked on 7 August 2026 and resolved on 30 and 31 August. A single marker scored it on 2 September. A second marker re-checked a sample of calls on 14 September.

The questions asked about the month ahead, with data up to early August in hand. That makes Round 2 context-informed too, but less so than Round 1, because the answers lay three to four weeks in the future.

HOW ROUND 2 WAS BUILT

The round had two sets. The first held 150 questions, 30 for each of the five lenses. Each named its source and threshold in the question itself. The second held 200 benchmark questions across eight domains, from markets and technology to sport, climate and health.

Fifteen questions were voided because the data needed to mark them could not be found after the event. Five of them were energy and commodity questions, which depended on figures that are hard to obtain without paid terminals.

Round 2 results by set and topic

SET	TOPIC	ASKED	VOID	RIGHT	HIT RATE
Five lenses	Social	30 asked	3 void	21 of 27	77.8%
Five lenses	Technological	30 asked	2 void	26 of 28	92.9%
Five lenses	Economic	30 asked	0 void	26 of 30	86.7%
Five lenses	Environmental	30 asked	2 void	25 of 28	89.3%
Five lenses	Political	30 asked	0 void	25 of 30	83.3%
Benchmark	Markets & macro	70 asked	2 void	53 of 68	77.9%
Benchmark	Technology	58 asked	0 void	39 of 58	67.2%
Benchmark	Politics & geopolitics	22 asked	0 void	18 of 22	81.8%
Benchmark	Energy & commodities	22 asked	5 void	12 of 17	70.6%
Benchmark	Culture / sport / corporate	12 asked	0 void	11 of 12	91.7%

SET	TOPIC	ASKED	VOID	RIGHT	HIT RATE
Benchmark	Climate	8 asked	0 void	7 of 8	87.5%
Benchmark	Cyber	5 asked	0 void	5 of 5	100.0%
Benchmark	Health	3 asked	1 void	2 of 2	100.0%

ROUND 2 SCORECARD

80.6%

of Round 2 calls were right

Round 2 scored 270 of 335, a hit rate of 80.6%, with a Brier score of 0.165.^[3] That is a skill score of 0.34 over a coin flip. The five-lens set scored 86.0% and the benchmark set scored 76.6%. Technology was the weakest benchmark domain at 67.2%.

Round 2: how often each level of confidence was right

SOURCE: 311 INSTITUTE ROUND 2 PACK, 2026.

HIT RATE BY CONFIDENCE (%)

FORECAST AGAINST OUTCOME (%)

In the right-hand chart, indigo bars show our average forecast in each band and cyan bars show the share of those events that happened.

Confidence was a reliable guide. Calls made at 70–79% were right 94.1% of the time, and calls at 80% or more were right in 66 of 68 cases. Accuracy rose with confidence, which is the shape a skilled forecaster should show.

We were again too cautious in the middle. Events we gave a 60–79% chance happened 91.5% of the time. We were pointing the right way but holding back, as in Round 1.

Coin-flip calls added nothing. We gave exactly 50% to 45 questions, 39 of which could be scored. A 50% call counts as a yes, and 26 of those 39 resolved yes, so they scored as hits. Without them the hit rate would have been 82.4%. From Round 3 onwards, exact coin-flip calls are no longer allowed.

Round 2: our forecasts against what happened

FORECAST THAT THE ANSWER IS YES	CALLS	OUR AVERAGE FORECAST	SHARE THAT HAPPENED
0–19%	27 calls	10.4%	0.0%
20–39%	51 calls	28.4%	7.8%
40–59%	154 calls	49.7%	62.3%
60–79%	71 calls	65.6%	91.5%
80–100%	32 calls	88.2%	93.8%

Source: 311 Institute Round 2 pack, 2026.

THE SECOND MARKER CHECK

A second marker independently re-marked 27 calls, each with its own source and date. They disagreed with the first marker on 5. Applying those changes moves the round from 80.6% to 79.7%.

Round 2: the calls the second marker changed

QUESTION AS LOCKED	OUR CALL	FIRST MARK	SECOND MARK
The Billboard 200 #1 album on the 30 Aug chart is by a solo artist (not a group)	55% yes	Yes	No
US retail gasoline national average is below 3.50/gal on 30 Aug	60% yes	Yes	No
An Atlantic hurricane ($\geq$ Cat 1) forms by 30 Aug	65% yes	Yes	No
EIA weekly crude inventories post a draw in ≥ 2 of the 3 window weeks	55% yes	Yes	No
A crewed spaceflight launches 8–30 Aug (any provider)	45% yes	Yes	No

Source: 311 Institute Round 2 pack, second marking of 14 Sep 2026.

One of the five turned on a question defect. The question named a chart date that does not exist, because the chart is published on Saturdays. The others were plain marking differences, which is exactly why a second marker matters.

CALLS THAT STOOD OUT

The two costliest misses were political shocks priced as near certainties. We gave 92% to the UK prime minister being unchanged on 30 August, and 88% to Nicolás Maduro still being president of Venezuela. Neither held.

The UK call repeated Round 1's stale premise. A new prime minister had been in office since 20 July, more than two weeks before Round 2 was locked. A live check of that single fact would have prevented both UK misses, in Round 1 and Round 2.

Round 2: the five costliest misses

QUESTION AS LOCKED	OUR CALL	OUTCOME	BRIER
The UK Prime Minister is unchanged (Starmer) on 30 Aug	92% yes	No	0.846
Venezuela: Maduro is president on 30 Aug	88% yes	No	0.774
G7 Sanctions Regime Expansion: Will G7 nations implement a secondary sanctions protocol targeting non-G7 financial institutions facilitating trade in restricted dual-use tech by August 31, 2026?	30% yes	Yes	0.490
At least one Magnificent-7 stock sets a 52-week high 11–28 Aug	70% yes	No	0.490
July retail sales headline MoM (mid-Aug) is negative (<0.0%)	30% yes	Yes	0.490

Source: 3i1 Institute Round 2 pack, 2026.

Round 2: the five strongest hits

QUESTION AS LOCKED	OUR CALL	OUTCOME	BRIER
US Four-Day Workweek Policy Legislation: Will the US federal government have passed legislation establishing a standard 32-hour workweek without loss of pay across federal agencies on or before August 31, 2026?	2% yes	No	0.000
US Commercial Nuclear Fusion Grid Delivery: Will any commercial fusion facility in the US deliver net electricity (>0 kW) to the public utility grid for a continuous 24-hour period before August 31, 2026?	2% yes	No	0.000
UK Foreign Policy & Comprehensive Partnership: Will the United Kingdom have formally rejoined the EU Single Market or EU Customs Union as of August 31, 2026?	2% yes	No	0.000
US Universal Basic Income Trials: Will any US state have enacted state-funded, ongoing universal basic income (UBI) for all state residents (non-pilot) as of August 31, 2026?	3% yes	No	0.001
Putin is President of Russia on 30 Aug	97% yes	Yes	0.001

Source: 3i1 Institute Round 2 pack, 2026.

I WHAT ROUND 2 TAUGHT US

- ① Ban exact 50% calls, which add noise and no insight
- ② Check every named office holder live on the day of lock
- ③ Use a second marker on every call, not a sample
- ④ Avoid questions whose data sits behind paid terminals
- ⑤ Watch technology questions, the weakest benchmark domain

The calls we were sure of held. The calls we were unsure of were luck.

I ROUND 2 QUESTIONS AND ANSWERS

All 350 Round 2 calls are listed below as they were locked. References 001 to 150 are the five-lens set and 151 to 350 the benchmark set. Our call shows the probability we gave that the answer would be yes.

REF	QUESTION	OUR CALL	OUTCOME	RESULT	BRIER
001	US Remote Work Adoption. According to the US Bureau of Labor Statistics (BLS) Current Population Survey (CPS) data released for August 2026, will the percentage of employed persons teleworking or working at home for pay exceed 20.0%?	50% yes	No	MISS	0.250
002	EU Youth Unemployment Rate. Will Eurostat's seasonally adjusted youth unemployment rate (under 25) for the Eurozone (EA-20) be below 14.5% as of August 31, 2026?	50% yes	No	MISS	0.250
003	Japan Female Labor Force Participation. Will the female labor force participation rate in Japan for women aged 15–64 exceed 75.0% according to Japan's Ministry of Internal Affairs and Communications (MIC) Labor Force Survey by August 31, 2026?	55% yes	Yes	HIT	0.203
004	US Healthcare AI Adoption in Hospitals. Will more than 35% of US acute care hospitals have implemented AI-based clinical decision support systems in emergency departments according to AHA survey criteria by August 31, 2026?	35% yes	Void	VOID	–
005	UK Higher Education International Enrollment. Will UK Home Office student visa issuances for entry in the 2026/2027 academic year be lower than total issuances for the 2025/2026 academic year as of August 31, 2026?	65% yes	Yes	HIT	0.123
006	China Retirement Age Implementation. Will China's Ministry of Human Resources and Social Security have officially raised the mandatory retirement age for male urban workers above 60 years old prior to August 31, 2026?	85% yes	Yes	HIT	0.023
007	US Minimum Wage Increases. Will the federal minimum wage in the United States be increased above 7.25 per hour by an enacted act of Congress before August 31, 2026?	5% yes	No	HIT	0.003
008	EU Artificial Intelligence Act HR Compliance. Will the enforcement phase for High-Risk AI systems under the EU AI Act (specifically Annex III systems used in recruitment/HR) be fully applicable and enforceable across EU member states on or before August 31, 2026?	30% yes	No	HIT	0.090
009	South Korea Fertility Rate Policy Target. Will South Korea's monthly registered live births in June/July 2026 show a year-over-year increase compared to the same period in 2025 according to Statistics Korea by August 31, 2026?	55% yes	Yes	HIT	0.203
010	Gallup Trust in Media. Will Gallup's annual confidence in news media poll report a 'great deal' or 'quite a lot' of trust figure higher than 30% in the US by August 31, 2026?	50% yes	No	MISS	0.250
011	German Public Health System Coverage. Will statutory health insurance (GKV) contribution rates in Germany average above 16.5% as reported by the Federal Ministry of Health as of August 31, 2026?	60% yes	Yes	HIT	0.160
012	India Digital Health ID Adoption. Will the total number of Ayushman Bharat Health Accounts (ABHA) created in India exceed 700 million as recorded on the official NHA dashboard by August 31, 2026?	70% yes	Yes	HIT	0.090
013	US College Enrollment Rates. Will National Student Clearinghouse Research Center data show total undergraduate enrollment in the US higher in Spring/Summer 2026 than in Spring/Summer 2025?	55% yes	Yes	HIT	0.203
014	EU Platform Work Directive. Will at least 15 EU member states have fully transposed the EU Platform Work Directive into national legislation by August 31, 2026?	30% yes	No	HIT	0.090
015	Singapore Population Silver Tsunami Standard. Will Singapore's Department of Statistics report that citizens aged 65 and older constitute more than 20.0% of the total resident population as of August 31, 2026?	50% yes	No	MISS	0.250
016	US Life Expectancy at Birth. Will the CDC National Center for Health Statistics (NCHS) provisionally report US life expectancy at birth for 2025 to be above 78.0 years by August 31, 2026?	55% yes	No	MISS	0.303
017	UK National Health Service (NHS) Waiting Lists. Will the total NHS England consultant-led referral to treatment (RTT) waiting list be under 7.0 million patients as of the official August 31, 2026 NHS dataset release?	35% yes	No	HIT	0.123
018	Japan Foreign Resident Population. Will the total number of registered foreign residents in Japan exceed 3.6 million according to the Immigration Services Agency of Japan as of August 31, 2026?	65% yes	Yes	HIT	0.123
019	US Universal Basic Income Trials. Will any US state have enacted state-funded, ongoing universal basic income (UBI) for all state residents (non-pilot) as of August 31, 2026?	3% yes	No	HIT	0.001
020	France Pension Reform Statutory Age. Will the statutory minimum retirement age in France reach 63 years old under the implemented pension schedule as of August 31, 2026?	50% yes	No	MISS	0.250
021	Indonesia Capital Relocation (Nusantara). Will the official administrative seat of government of Indonesia be legally transferred from Jakarta to Nusantara (IKN) by official presidential decree prior to August 31, 2026?	25% yes	No	HIT	0.063
022	US Four-Day Workweek Policy Legislation. Will the US federal government have passed legislation establishing a standard 32-hour workweek without loss of pay across federal agencies on or before August 31, 2026?	2% yes	No	HIT	0.000

REF	QUESTION	OUR CALL	OUTCOME	RESULT	BRIER
023	US Higher Education Enrollment in AI Degrees. Will the National Center for Education Statistics (NCES) IPEDS data show that over 150 accredited US degree-granting postsecondary institutions offer an undergraduate degree in Artificial Intelligence by August 31, 2026?	50% yes	Void	VOID	–
024	EU Telehealth Standard Adoption. Will Eurostat report that over 25% of individuals aged 16–74 in the EU-27 conducted a consultation with a healthcare professional online in the preceding 12 months as of August 31, 2026?	45% yes	Void	VOID	–
025	Japan Male Parental Leave Rate. Will Japan's Ministry of Health, Labour and Welfare report that the paternal childcare leave uptake rate among eligible male workers in Japan reached or exceeded 50.0% for FY2025/2026 by August 31, 2026?	40% yes	No	HIT	0.160
026	US Overdose Mortality Rate. Will the CDC NCHS provisional 12-month rolling estimate of total drug overdose deaths in the US fall below 90,000 for the period ending March 2026 (released by August 31, 2026)?	60% yes	Yes	HIT	0.160
027	UK Flexible Work Legislation Enforcement. Will the UK Employment Rights Act mandates requiring employers to treat flexible working requests as a default right from Day 1 remain legally binding and active as of August 31, 2026?	90% yes	Yes	HIT	0.010
028	South Korea Marriage Rate Trend. Will Statistics Korea report a year-over-year increase in cumulative registered marriages for H1 2026 compared to H1 2025 by August 31, 2026?	55% yes	Yes	HIT	0.203
029	US K-12 AI Policy Adoption. Will state departments of education in at least 30 US states have published official policy guidelines for the use of Generative AI in public K-12 classrooms by August 31, 2026?	60% yes	Yes	HIT	0.160
030	Germany Dual Education Enrollment. Will the German Federal Institute for Vocational Education and Training (BIBB) report more than 135,000 total enrolled students in dual study programs for the 2025/2026 academic year by August 31, 2026?	55% yes	Yes	HIT	0.203
031	US Frontier AI Model Training Limits. Will any commercially deployed AI model in the US exceed 10 ²⁶ total floating-point operations (FLOPs) used during training and be registered under federal reporting mandates by August 31, 2026?	20% yes	No	HIT	0.040
032	EU Semiconductor Sovereignty (Chips Act Goal). Will the European Union's share of global semiconductor manufacturing capacity exceed 12% according to SIA/SEMI quarterly tracking report by August 31, 2026?	15% yes	No	HIT	0.023
033	TSMC 2nm Process Commercial Volume Shipping. Will Taiwan Semiconductor Manufacturing Company (TSMC) have begun volume commercial shipping of 2-nanometer (N2) process chips to commercial customers by August 31, 2026?	55% yes	Yes	HIT	0.203
034	US Autonomous Vehicle Commercial Miles. Will commercial robotaxi operations (e.g., Waymo) be operating without safety drivers in more than 6 distinct US metropolitan statistical areas (MSAs) as of August 31, 2026?	50% yes	Yes	HIT	0.250
035	Starlink Satellite Direct-to-Cell Capability. Will SpaceX's Starlink direct-to-cell voice and data service be commercially operational on a major US carrier network (e.g., T-Mobile) nationwide by August 31, 2026?	40% yes	No	HIT	0.160
036	EU Cyber Resilience Act Enforcement. Will the main provisions of the European Cyber Resilience Act regarding mandatory security requirements for products with digital elements be fully enforceable on or before August 31, 2026?	10% yes	No	HIT	0.010
037	Quantum Advantage Threshold. Will NIST or Nature/Science publish a peer-reviewed verification of a quantum computer achieving a practical, non-synthetic quantum advantage in materials science or chemistry by August 31, 2026?	25% yes	No	HIT	0.063
038	China Commercial Humanoid Robot Units. Will Unitree, Fourier Intelligence, or Agibot ship over 10,000 cumulative commercial humanoid robot units into industrial supply chain applications by August 31, 2026?	50% yes	Yes	HIT	0.250
039	US Nuclear SMR Commercial Operation. Will the first commercial Small Modular Reactor (SMR) connected to the grid in the United States achieve full commercial operation before August 31, 2026?	10% yes	No	HIT	0.010
040	Global Solid-State Battery Commercial EV Deployment. Will a major global automaker (Toyota, VW, BMW, or NIO) begin mass market sales of a production passenger vehicle equipped with a full solid-state battery in North America, Europe, or Asia by August 31, 2026?	15% yes	No	HIT	0.023
041	OpenAI Revenue Run Rate. Will OpenAI's annualized revenue run rate exceed 10 billion USD according to reported corporate releases by August 31, 2026?	95% yes	Yes	HIT	0.003
042	UK AI Safety Institute Evaluations. Will the UK AI Safety Institute have evaluated and publicly released safety benchmark reports for at least 5 new frontier foundation models before August 31, 2026?	60% yes	Yes	HIT	0.160
043	Japan Hydrogen-Fueled Power Generation. Will Japan's JERA or major energy provider commence continuous 30%+ co-firing of hydrogen or ammonia at a commercial thermal power station by August 31, 2026?	30% yes	No	HIT	0.090

REF	QUESTION	OUR CALL	OUTCOME	RESULT	BRIER
044	US Space Tech — Artemis II Launch. Will NASA's crewed Artemis II mission around the Moon have launched and completed its flight hardware verification prior to August 31, 2026?	55% yes	Yes	HIT	0.203
045	Hypersonic Missile Operational Deployment in Europe/NATO. Will NATO officially confirm operational integration of air-launched hypersonic cruise missiles on European-deployed tactical aircraft by August 31, 2026?	15% yes	No	HIT	0.023
046	EU Digital Identity (EUDI) Wallet Availability. Will at least 10 EU Member States have launched fully functional national EUDI Wallets accessible to residents by August 31, 2026?	35% yes	No	HIT	0.123
047	Global 6G Standard Specifications. Will 3GPP officially freeze Release 21 (defining full 6G technical specs) on or before August 31, 2026?	5% yes	No	HIT	0.003
048	US Tech Antitrust Enforcement (Alphabet/Google). Will a federal court final remedy order requiring the structural divestiture of Google's Chrome browser or Android operating system be active or stayed on appeal as of August 31, 2026?	30% yes	No	HIT	0.090
049	China Semiconductor Lithography Self-Sufficiency. Will SMEE (Shanghai Micro Electronics Equipment) commercially deliver a native EUV lithography tool to a domestic Chinese fab by August 31, 2026?	8% yes	No	HIT	0.006
050	Perovskite-Silicon Tandem Solar Efficiency. Will commercially certified solar panels incorporating perovskite-silicon tandem cells reaching >28% module efficiency be available for retail purchase in Europe or Asia by August 31, 2026?	20% yes	No	HIT	0.040
051	Apple Vision Pro Active Base. Will Apple's spatial computing headset line have reached cumulative worldwide hardware sales of over 1.5 million units as estimated by IDC/Gartner by August 31, 2026?	40% yes	No	HIT	0.160
052	US FDA Approval of Synthetic Biology Therapeutics. Will the US FDA approve a CRISPR-Cas9 genome-editing therapy for a non-rare polygenic disease prior to August 31, 2026?	5% yes	No	HIT	0.003
053	US Commercial Nuclear Fusion Grid Delivery. Will any commercial fusion facility in the US deliver net electricity (>0 kW) to the public utility grid for a continuous 24-hour period before August 31, 2026?	2% yes	No	HIT	0.000
054	EU AI Act Foundation Model Regulatory Registry. Will the European AI Office have established and published the official public registry of General-Purpose AI (GPAI) models evaluated under systemic risk thresholds on or before August 31, 2026?	50% yes	No	MISS	0.250
055	US FAA Commercial eVTOL Certification. Will the US Federal Aviation Administration (FAA) issue full Type Certification for a commercial electric vertical takeoff and landing (eVTOL) passenger aircraft (e.g., Joby Aviation or Archer Aviation) prior to August 31, 2026?	45% yes	No	HIT	0.203
056	Global Enterprise AI Agent Integration. Will Gartner report that over 20% of enterprise software applications incorporate autonomous AI agentic workflows in production environments as of August 31, 2026?	35% yes	No	HIT	0.123
057	China Domestic High-Bandwidth Memory (HBM) Production. Will ChangXin Memory Technologies (CXMT) or domestic Chinese memory manufacturers achieve commercial volume mass production of HBM2E or higher specifications by August 31, 2026?	40% yes	Void	VOID	–
058	US Post-Quantum Cryptography Migration Mandate. Will CISA or OMB report that all US CFO Act federal agencies have submitted complete post-quantum cryptographic migration inventories pursuant to NSM-10 by August 31, 2026?	50% yes	No	MISS	0.250
059	Japan Robotics in Elder Care Services. Will Japan's Ministry of Economy, Trade and Industry (METI) report that nursing home facilities nationwide utilize certified nursing care robots in over 40% of locations as of August 31, 2026?	25% yes	No	HIT	0.063
060	Autonomous Drone Delivery Scale in Europe. Will European Union Aviation Safety Agency (EASA) certified Beyond Visual Line of Sight (BVLOS) commercial drone deliveries complete over 500,000 total commercial flights across the EU by August 31, 2026?	30% yes	Void	VOID	–
061	US Short-Term Rate Path (re-anchored 2026-08-07). Will the 2-Year US Treasury note yield close above 4.00% on August 31, 2026? [Re-anchored from 'Fed Funds target range <= 4.00%' - no FOMC meeting falls before 31 Aug 2026 (next is 16 Sept), so the target rate is fixed through the resolution date and could not resolve on new information, the 2Y yield is the market's cleanest read of the Fed path.]	72% yes	Yes	HIT	0.078
062	European Central Bank Deposit Facility Rate. Will the ECB Deposit Facility Rate be at or below 2.50% following its latest Monetary Policy meeting before August 31, 2026?	90% yes	Yes	HIT	0.010
063	Bank of Japan Uncollateralized Overnight Call Rate. Will the Bank of Japan's key short-term policy interest rate be at or above 0.75% as of August 31, 2026?	45% yes	Yes	MISS	0.303
064	US Annualized Real GDP Growth. Will the US Bureau of Economic Analysis (BEA) Second Estimate for Q2 2026 Real GDP growth be above 2.2% (seasonally adjusted annual rate)?	45% yes	No	HIT	0.203
065	Eurozone Annual CPI Inflation. Will Eurostat's Eurozone flash annual inflation rate for August 2026 be below 2.3%?	60% yes	No	MISS	0.360

REF	QUESTION	OUR CALL	OUTCOME	RESULT	BRIER
066	China Annual Real GDP Target. Will China's official National Bureau of Statistics reported GDP growth for H1 2026 meet or exceed 4.8% year-over-year?	65% yes	No	MISS	0.423
067	Brent Crude Oil Price. Will the settlement price for the front-month Brent Crude Oil futures contract on ICE be below 75.00 USD per barrel on August 31, 2026?	45% yes	No	HIT	0.203
068	Global Market Cap Concentration (Tech 7). Will the top 7 US technology companies by market cap represent more than 28.0% of the total S&P 500 index weight on August 31, 2026?	85% yes	Yes	HIT	0.023
069	US Labour Market - Jobless Claims (re-anchored 2026-08-07). Will any weekly seasonally-adjusted US initial jobless claims figure released between 8 and 31 August 2026 come in at or above 250,000 (US DOL)? [Re-anchored from 'July U-3 > 4.3%', which resolved FALSE on 7 Aug 2026 (July U-3 = 4.1%) and had no fresh U-3 print before 31 Aug (next ~4 Sept).]	48% yes	No	HIT	0.230
070	Germany Real GDP Growth. Will the Federal Statistical Office (Destatis) report positive quarter-on-quarter adjusted Real GDP growth for Germany in Q2 2026?	50% yes	Yes	HIT	0.250
071	UK Inflation Rate (CPI). Will the UK Office for National Statistics (ONS) headline 12-month CPI inflation rate for July 2026 be equal to or below 2.5%?	25% yes	No	HIT	0.063
072	US Treasury 10-Year Yield (re-anchored 2026-08-07). Will the yield on 10-Year US Treasury Notes close above 4.50% on August 31, 2026? [Re-anchored from > 4.25% - current ~4.60%, threshold moved near-money to restore forecasting value.]	62% yes	Yes	HIT	0.144
073	US Housing Affordability Index. Will the National Association of Realtors (NAR) Housing Affordability Index for June/July 2026 be higher than 100.0?	50% yes	Yes	HIT	0.250
074	Global Electric Vehicle Sales Share. Will plug-in electric vehicles (BEV + PHEV) account for more than 22% of total global light-duty vehicle sales in H1 2026 according to IEA/BNEF reporting?	55% yes	Yes	HIT	0.203
075	India Real GDP Growth Rate. Will the Ministry of Statistics and Programme Implementation (MOSPI) report India's Q1 FY2026-27 (April-June 2026) GDP growth above 6.8%?	55% yes	Yes	HIT	0.203
076	USD to Japanese Yen (USD/JPY) Exchange Rate. Will the USD/JPY exchange rate close below 145.00 JPY per USD on August 31, 2026?	40% yes	No	HIT	0.160
077	Euro to USD (EUR/USD) Exchange Rate. Will the EUR/USD exchange rate close above 1.1200 USD per Euro on August 31, 2026?	72% yes	Yes	HIT	0.078
078	US Commercial Real Estate Default Rate. Will the delinquency rate on commercial real estate (CRE) loans backed by CMBS exceed 6.5% as of August 31, 2026 according to Trepp/Fitch?	55% yes	Yes	HIT	0.203
079	Global Sovereign Debt to GDP Ratio. Will total global debt-to-GDP ratio exceed 335% according to the Institute of International Finance (IIF) Global Debt Monitor released prior to August 31, 2026?	55% yes	No	MISS	0.303
080	Gold Price Spot Level (re-anchored 2026-08-07). Will the London Bullion Market Association (LBMA) Gold Price PM fixing exceed 4,250.00 USD per troy ounce on August 31, 2026? [Re-anchored from > 2,500 - spot ~4,350, threshold moved near-money.]	55% yes	Yes	HIT	0.203
081	US Venture Capital Investment Volume. Will total US VC deal value in Q2 2026 exceed 45 billion USD according to PitchBook-NVCA statistics?	65% yes	Yes	HIT	0.123
082	EU Trade Balance with China. Will the European Union's monthly trade deficit in goods with China (Eurostat data) exceed EUR20 billion in June 2026?	50% yes	Yes	HIT	0.250
083	US Corporate Debt Refinancing Cliff. Will the ICE BofA US High Yield Index Option-Adjusted Spread exceed 500 basis points on August 31, 2026?	15% yes	No	HIT	0.023
084	China Youth Unemployment Rate Reporting. Will China's National Bureau of Statistics report the urban youth unemployment rate (ages 16-24, excluding students) above 15.0% for July 2026?	55% yes	Yes	HIT	0.203
085	EU Digital Euro Pilot Status. Will the European Central Bank (ECB) officially enter the operational issuance phase (launching live user transactions) for the Digital Euro prior to August 31, 2026?	8% yes	No	HIT	0.006
086	US Dollar Share of Global Reserves. Will the IMF Currency Composition of Official Foreign Exchange Reserves (COFER) data show the US Dollar holding over 54.0% of total allocated global reserves as of Q1/Q2 2026 reporting by August 31, 2026?	85% yes	Yes	HIT	0.023
087	UK Real Wage Growth Rate. Will the UK Office for National Statistics (ONS) report positive real average weekly earnings growth (excluding bonuses, adjusted for CPIH) for the three months to June 2026?	65% yes	Yes	HIT	0.123
088	Global Semiconductor Industry Revenue. Will World Semiconductor Trade Statistics (WSTS) project annual global semiconductor market revenues to exceed 650 billion USD for calendar year 2026 as of August 31, 2026?	85% yes	Yes	HIT	0.023

REF	QUESTION	OUR CALL	OUTCOME	RESULT	BRIER
089	US Commercial Office Vacancy Rate. Will Moody's Analytics or CBRE report national US office vacancy rates exceeding 20.0% as of Q2 2026?	60% yes	Yes	HIT	0.160
090	India Apple iPhone Manufacturing Share. Will Foxconn, Pegatron, and Wistron/Tata combined produce over 20% of all global Apple iPhone production volume in India during H1 2026 according to TrendForce or Counterpoint Research?	55% yes	Yes	HIT	0.203
091	Global Mean Surface Temperature Anomaly. Will Copernicus Climate Change Service (C3S) report that July 2026 set a new record as the hottest July globally in recorded history?	45% yes	No	HIT	0.203
092	EU Carbon Border Adjustment Mechanism (CBAM). Will the definitive financial adjustment system (levying financial obligations) under EU CBAM be in operational phase or scheduled for January 2026 start without statutory delay as of August 31, 2026?	80% yes	Yes	HIT	0.040
093	EU ETS Carbon Price. Will the benchmark EU Allowance (EUA) December 2026 futures contract on ICE Endex trade above EUR85.00 per metric ton on August 31, 2026?	45% yes	No	HIT	0.203
094	US Power Sector Renewable Generation Share. Will monthly utility-scale solar and wind generation in the US exceed 22% of total electricity generation in June/July 2026 according to EIA monthly statistics?	55% yes	No	MISS	0.303
095	China Non-Fossil Energy Capacity Target. Will China Electricity Council (CEC) report that installed non-fossil fuel power generation capacity in China reached 58% of total power capacity prior to August 31, 2026?	65% yes	Yes	HIT	0.123
096	Global Atmospheric CO2 Concentration. Will the NOAA Global Monitoring Laboratory report the July 2026 monthly mean CO2 level at Mauna Loa Observatory above 427.0 ppm?	80% yes	Yes	HIT	0.040
097	US Extreme Weather Loss Disasters. Will NOAA's National Centers for Environmental Information (NCEI) record 18 or more separate billion-dollar weather and climate disasters in the US for 2026 by August 31, 2026?	30% yes	No	HIT	0.090
098	IMO Net-Zero Framework. Will the IMO legal adoption of global fuel standards and GHG pricing mechanism be finalized without postponing the 2027 entry-into-force date as of August 31, 2026?	55% yes	No	MISS	0.303
099	Amazon Rainforest Deforestation Rate. Will Brazil's INPE (PRODES/DETER) report a year-over-year decrease in Amazon deforestation alerts for the period August 2025–July 2026 compared to the previous year?	60% yes	Yes	HIT	0.160
100	UN High Seas Treaty Ratification. Will at least 60 nations have formally deposited their instruments of ratification for the UN Biodiversity Beyond National Jurisdiction (BBNJ) Treaty to trigger entry into force as of August 31, 2026?	55% yes	Yes	HIT	0.203
101	US Offshore Wind Capacity Installed. Will cumulative operational offshore wind capacity connected to the US electrical grid exceed 3.0 gigawatts (GW) by August 31, 2026?	40% yes	No	HIT	0.160
102	Global Battery Energy Storage Systems (BESS) Installations. Will BNEF record global BESS additions reaching over 70 GW / 160 GWh annually by August 31, 2026?	60% yes	Yes	HIT	0.160
103	EU Corporate Sustainability Due Diligence Directive (CSDDD). Will the first implementation wave threshold for CSDDD remain legally binding without legislative repeal by the European Parliament on or before August 31, 2026?	50% yes	Yes	HIT	0.250
104	Arctic Sea Ice Extent Minimum. Will the National Snow and Ice Data Center (NSIDC) record the 2026 Arctic sea ice daily extent falling below 4.2 million square kilometers before August 31, 2026?	20% yes	No	HIT	0.040
105	US Clean Hydrogen Production Tax Credit (45V). Will the US IRS/Treasury final rules for the 45V Clean Hydrogen tax credit (including hourly matching requirements) be enacted and in legal effect on August 31, 2026?	60% yes	Yes	HIT	0.160
106	Japan Nuclear Power Generation Restart. Will Japan's Nuclear Regulation Authority (NRA) have authorized and restarted operational power generation at Kashiwazaki-Kariwa Nuclear Power Plant Unit 7 prior to August 31, 2026?	55% yes	No	MISS	0.303
107	Global Critical Minerals Supply Surplus/Deficit. Will S&P Global Commodity Insights project a lithium carbonate equivalent (LCE) market deficit for calendar year 2026 as of August 31, 2026?	30% yes	No	HIT	0.090
108	US Sustainable Aviation Fuel (SAF) Production. Will US domestic SAF production capacity reach 1.0 billion gallons per year as measured by the Department of Energy by August 31, 2026?	20% yes	No	HIT	0.040
109	EU Nature Restoration Law Compliance. Will EU member states have submitted their first national restoration plans under the EU Nature Restoration Law to the European Commission by August 31, 2026?	35% yes	No	HIT	0.123
110	California Grid Clean Energy Target. Will California ISO (CAISO) report serving 100% of electricity demand from clean/renewable sources for at least 100 distinct days in 2026 prior to August 31, 2026?	60% yes	Yes	HIT	0.160

CHAPTER SUMMARY

Round 2 scored 80.6% on 335 calls across a wider set of topics than Round 1, with a Brier score of 0.165. Calls made at 70% or more were right 95.8% of the time. Coin-flip calls added nothing, and two political shocks priced as near certainties produced the costliest misses. A second marker changed 5 of 27 calls, which would move the round to 79.7%.

Confidence earned its keep. Coin-flips did not.

CHAPTER CLOSE

WHAT NEXT?

Round 2: the August expansion

QUESTIONS TO ASK

- 1 How should a forecaster price a status quo that looks certain?
- 2 Would your own marking survive a second, independent check?

05

PART FIVE

ROUND 3: THE FIRST BLIND TEST

05

Sep 2026

How accurate are our forecasts when the answer cannot be seen?

Round 3 was written blind, with harder questions and head-to-head contests. It scored 68.5%, lower than earlier rounds, and showed the best calibration of the three.

SCOPE

Purpose

Method

Rounds

Lessons

Round 3 removed the hindsight that flattered the first two rounds. It was written before the answers existed, and it asked harder questions than either earlier round.

of 251 scored calls right

0.26

skill score over a naive forecaster

40/87

head-to-head contests won by our pick

The round was locked on 19 September 2026 and resolved on 30 September. It was marked on 7 and 14 October and completed on 21 October. Of its 300 questions, 288 were written blind, about events with no visible answer when the set was sealed.

Every question was tagged at lock with its type, its topic lens, a difficulty score and how predictable it should be. Contest questions also carried a chance rate, the probability of picking the winner without any judgement.

HOW ROUND 3 WAS BUILT

The round asked 119 head-to-head questions, such as which of three stock indices would rise most or which named company would act first. These are far harder than a yes or no, because the chance of a correct guess is usually a third or less.

Round 3 results by question type

TYPE	WHAT IT ASKS	ASKED	VOID	RIGHT	HIT RATE
Event	Does a named event happen in the window?	98 asked	11 void	62 of 87	71.3%
First mover	Who among named candidates acts first?	74 asked	22 void	35 of 52	67.3%
Threshold	Is a figure above or below a set level?	44 asked	1 void	19 of 42	45.2%
Exit	Does a named office holder or entity leave?	23 asked	1 void	21 of 22	95.5%
Date pin	On which date or week does something happen?	17 asked	7 void	9 of 10	90.0%
Ranking	Which entity ranks first, second or third?	14 asked	2 void	9 of 12	75.0%
Margin	By how much does a figure move?	14 asked	1 void	6 of 13	46.2%
Exact value	Does a figure land inside a stated band?	10 asked	0 void	8 of 10	80.0%
Entrant	Does a new name enter a ranked list?	6 asked	3 void	3 of 3	100.0%

Source: 311 Institute Round 3 pack, 2026.

Each question was also tagged for predictability before any answer was known. The tag tells us what kind of judgement a question needs, and lets us see where our probabilities ran too high

or too low.

Round 3 results by predictability

KIND OF QUESTION	WHAT IT MEANS	SCORED	HIT RATE	AVERAGE FORECAST	SHARE THAT HAPPENED
Base rate	History gives a strong guide	30 calls	83.3%	78.7%	83.3%
Calendar	A scheduled event or publication	10 calls	90.0%	51.0%	70.0%
Contested	Several named candidates compete	87 calls	66.7%	48.1%	40.2%
Market noise	Short-run moves in prices and data	74 calls	60.8%	51.6%	52.7%
Shock	A sudden break from the status quo	50 calls	70.0%	42.9%	36.0%

Source: 311 Institute Round 3 pack, 2026.

VOIDED QUESTIONS

Marking found 48 of the 300 questions defective, and they are shown as void. Political questions lost 22 of 75. First-mover questions lost 22 of 74.

The defects fell into a few classes. Some named a source that did not cover the country asked about. Some named a date that did not exist for that source. Others asked for data that would not be published by the resolution date, or relied on pages that cannot be archived.

A coded defect check now runs on every question before lock. Tested against Round 3, it flags 45 of the 48 defects that marking found.^[7]

ROUND 3 SCORECARD

68.5%

of Round 3 calls were right

Round 3 scored 172 of 251, a hit rate of 68.5%, with a Brier score of 0.196.^[5] Against a naive forecaster on the same questions, the skill score is 0.26.

On the 239 scored questions written blind, the hit rate was 69.9%. One question, R3-208, is pending Beijing's September air quality data. Either result moves the round's rate by less than half a point.

Round 3: how often each level of confidence was right

SOURCE: 311 INSTITUTE ROUND 3 PACK, 2026.

HIT RATE BY CONFIDENCE (%)

FORECAST AGAINST OUTCOME (%)

In the right-hand chart, indigo bars show our average forecast in each band and cyan bars show the share of those events that happened.

Accuracy now rises with confidence, step by step. Calls made at 50–59% were right 51.0% of the time, at 60–69% 72.9%, at 70–79% 82.5% and at 80–89% 90.9%. All 15 calls at 90% or more were right. This staircase is what a skilled forecaster should show, and Round 1 did not.

The uncertain middle ran too high. Events we gave 40–59% happened only 38.7% of the time. Soft calls between 40% and 59% were right 67 times out of 124, about a coin flip.

Head-to-head picks beat chance by a wide margin. Our named pick won 40 of 87 contests, or 46.0%. The chance rates recorded at lock average 27%.^[6]

Round 3: our forecasts against what happened

FORECAST THAT THE ANSWER IS YES	CALLS	OUR AVERAGE FORECAST	SHARE THAT HAPPENED
0–19%	4 calls	11.8%	25.0%
20–39%	47 calls	30.6%	21.3%
40–59%	124 calls	48.0%	38.7%
60–79%	49 calls	65.5%	77.6%
80–100%	27 calls	88.1%	100.0%

WHERE ROUND 3 WAS STRONG

Round 3 hit rate by topic lens

SOURCE: 311 INSTITUTE ROUND 3 PACK, 2026.

Political questions scored best. They were right 46 times out of 53, or 86.8%. Many asked whether a named leader would still hold office, and exit questions as a type scored 95.5%.

Economic questions scored worst. They were right 39 times out of 74, or 52.7%. Threshold questions about price levels scored 45.2% and margin questions 46.2%. Questions that turned on where a market price would sit on one day were the hardest in the round.

Two old biases showed again. We over-priced sudden shocks, which we gave 42.9% on average and which happened 36.0% of the time. We under-priced the status quo, giving base-rate questions 78.7% when 83.3% came true.

CALLS THAT STOOD OUT

The costliest misses came from fast-moving corners: two questions about AI companies, the market value rankings, European gas storage and a football league table. Just outside the five,

we gave the Bank of Japan a 30% chance of changing rates in September, and it raised them on 18 September.

We gave 78% to European gas storage passing 90% by 30 September. Storage stood near 67% in mid-September, and the region entered the heating season with record-low stocks.

Round 3: the five costliest misses

QUESTION AS LOCKED	OUR CALL	OUTCOME	BRIER
Does Cohere publicly release a new AI model between 20 and 30 September 2026 per its official announcements page?	18% yes	Yes	0.672
Does any of Nvidia, Microsoft and Apple leave the global top three by market capitalisation by 30 September 2026?	20% yes	Yes	0.640
Is European natural-gas storage above 90% of capacity on 30 September 2026?	78% yes	No	0.608
In which week of September 2026 does OpenAI hold its next developer event per its announcements page?	the week of 28 September 2026 (25%)	Pick won	0.563
Which club sits top of the J1 League table on 30 September 2026? Named field: Vissel Kobe, Kawasaki Frontale, Sanfrecce Hiroshima, or another club.	Vissel Kobe (28%)	Pick won	0.518

Source: 311 Institute Round 3 pack, 2026.

Round 3: the five strongest hits

QUESTION AS LOCKED	OUR CALL	OUTCOME	BRIER
Does the person holding the Prime Minister of India at the start of September 2026 still hold that office on 30 Sep 2026?	98% yes	Yes	0.000
Does the person holding the President of Mexico at the start of September 2026 still hold that office on 30 Sep 2026?	97% yes	Yes	0.001
Is the 2026 Arctic sea-ice minimum extent below the 1981–2010 average per the source?	96% yes	Yes	0.002
Does the person holding the President of Argentina at the start of September 2026 still hold that office on 30 Sep 2026?	95% yes	Yes	0.003
Does the person holding the Prime Minister of Italy at the start of September 2026 still hold that office on 30 Sep 2026?	95% yes	Yes	0.003

Source: 311 Institute Round 3 pack, 2026.

WHAT ROUND 3 TAUGHT US

- ① A market-direction call far from 50% must name a dated signal
- ② Soft calls between 45% and 55% are reported separately as no-edge
- ③ Shock events are priced lower and the status quo higher
- ④ Every named candidate is checked live on the day of lock
- ⑤ Every question passes the coded defect check before lock

The bias corrections were tested before being adopted. A broad recalibration fitted to Round 2 made Round 3 worse, so it was rejected. Only the two biases that appeared in both rounds are corrected, and the corrections are re-fitted after every round.

Blind, the confident calls still held. The uncertain middle is where the work is.

CHAPTER SUMMARY

Round 3 is the honest baseline: 68.5% right on 251 calls, a Brier score of 0.196 and a skill score of 0.26 over a naive forecaster. Accuracy rose step by step with confidence, and our contest picks won 46% of the time against 27% by chance. Soft calls, price levels and defective questions were the costs, and each now has a rule against it.

Blind, the confident calls still held.

CHAPTER CLOSE

WHAT NEXT?

Round 3: the first blind test

QUESTIONS TO ASK

- 1 Which is more useful to you, a high hit rate or calls you can trust at every level?
- 2 How should a forecaster price the next market move?

06

PART SIX

LESSONS FROM THREE ROUNDS

06

2026

What does the record say about where our foresight can be trusted?

Across three rounds the hit rate fell as hindsight was removed, and calibration was best in the blind round. The next test is distance.

SCOPE

Purpose

Method

Rounds

Lessons

Each round tells part of the story. Read together, they show what kind of forecaster the 311 Institute is today, where our calls can be trusted and where they cannot yet.

Rounds

3 scored

Next

Rounds 4–6

Horizons

6, 10 and 14 weeks

THREE ROUNDS SIDE BY SIDE

Round 1, 86.8%. A first full round, written with much of the answer visible. It proved the method from lock to score.

Round 2, 80.6%. A larger round about the month ahead. Confidence proved reliable and a second marker tested the marking.

Round 3, 68.5%. The first blind round, with harder questions. The lowest hit rate, and the best calibration.

Hit rate and Brier score by round

SOURCE: 311 INSTITUTE ROUND PACKS, 2026.

HIT RATE (%)

86.8 · 80.6 · 68.5

BRIER SCORE (LOWER IS BETTER)

The hit rate fell for good reasons. Round 3 removed the hindsight that helped Rounds 1 and 2. It also asked harder questions, including contests where a correct guess usually has a chance of a third or less. A falling score on a harder, cleaner test is the benchmark working.

Calibration was best in Round 3. We measure calibration as the average gap between our forecast and what happened, across five bands of forecast. The gap was 14.5 points in Round 1, 15.8 in Round 2 and 10.2 in Round 3. In Rounds 1 and 2 we were too cautious in the middle range. In Round 3 accuracy climbed step by step with confidence, from about half right at 50–59% to every call right at 90% or more.

Confident calls held in every round. Calls made at 70% or more were right 91.4%, 95.8% and 88.3% of the time across the three rounds, counting calls in either direction. That differs from

the share of events given 70% or more that came true, which counts only calls that something would happen. Either way, it is the strongest finding in the record.

The three rounds compared

MEASURE	ROUND 1	ROUND 2	ROUND 3
Calls locked	310 calls	350 calls	300 calls
Calls scored	310 calls	335 calls	251 calls
Voided as defective	0 questions	15 questions	48 questions
Hit rate	86.8%	80.6%	68.5%
Brier score	0.149	0.165	0.196
Skill over a coin flip	0.40	0.34	0.22
Right when 70%+ sure, either way	91.4%	95.8%	88.3%
Calibration gap, in points	14.5	15.8	10.2
Conditions	Context-informed	Context-informed	Written blind

WHAT THE RECORD DOES NOT SHOW

What the record supports

Our confident calls are reliable, our contest picks beat chance by a wide margin and our calibration was best once hindsight was removed.

What it cannot yet support

Three short rounds marked by one marker cannot show long-range skill. The horizon test and a full second marking are needed before stronger claims.

We are careful about what three rounds can prove. Every round so far resolved within five weeks of lock. Our clients mostly ask about years, not weeks, and no round has yet tested that.

THE HORIZON TEST

Previously we asked

How often are our forecasts right?

Now we ask

How far ahead do our forecasts stay useful?

Rounds 4, 5 and 6 were sealed on 20 September 2026. They resolve on 31 October, 30 November and 31 December, about six, ten and fourteen weeks after lock.^[8] Together they measure how quickly our edge fades with distance.

Each set went through a pre-registered defect review before any answer was known. After that review, 188, 195 and 184 questions remain to be scored. The corrections described in Part V were registered as a separate shadow forecast, so the original calls remain the figure of record.

From 2027 the benchmark moves to a quarterly cadence of 300 scored questions. Each round will be published in full, in the same form as this report.

CHAPTER SUMMARY

Three rounds give us an honest baseline. The hit rate fell as hindsight was removed, calibration was best in the blind round and confident calls held in every round. Stale premises, coin-flip calls, defective questions and market timing each have a fix already in place. Rounds 4 to 6 will show how far ahead that skill reaches.

The next test is distance, not difficulty.

CHAPTER CLOSE

WHAT NEXT?

Lessons from three rounds

PREDICTIONS

PREDICTION

60% CONFIDENCE • BY NOV 2026

Round 4, the six-week horizon test, scores between 60% and 75% on its scored calls when it is marked in November 2026.

BASIS

Round 3 scored 68.5% on a mostly blind set at a horizon under two weeks. Defect checks should lift the score, and a longer horizon should lower it.

TRIPWIRE

A score above 75% would mean the horizon penalty is smaller than we assume.

PREDICTION

65% CONFIDENCE • BY FEB 2027

Accuracy falls with distance. Round 6, at fourteen weeks, scores below Round 4, at six weeks, when both are marked by February 2027.

BASIS

Forecast skill usually decays as the horizon lengthens, because more can change before the answer is known.

TRIPWIRE

If Round 6 matches or beats Round 4, our edge is holding further out than expected.

QUESTIONS TO ASK

- 1 How far ahead can any forecaster see before skill fades?
- 2 What would you change if your own forecasts were scored every quarter?

STRATEGIC SUMMARY

Three rounds and 960 locked calls give the 311 Institute a baseline it can stand behind. On the first round written blind, our forecasts scored 68.5% with a Brier score of 0.196. That is clearly better than a naive forecaster, and well short of perfect.

The record shows where our judgement can be trusted. Calls made with conviction come true at a high rate in every round. Head-to-head picks beat chance by a wide margin. Calibration was best in the cleanest round.

The record also shows what to fix. Stale premises, coin-flip calls, defective questions and market timing each produced measurable losses. Each now has a rule or a check against it.

Rounds 4 to 6 report by early 2027 and will show how far ahead that skill reaches. We will publish them in full, misses included, as we have here.

ASSUMPTIONS & CAVEATS

What to bear in mind

The judgements that most affect how this report should be read, highest impact first. The full set — significant assumptions, market-boundary decisions, source limitations and areas of uncertainty — is set out in the Annex under Assumptions and Caveats.

HIGH IMPACT

Single marker

Each round is marked once in full. A partial second marking would move Round 2 from 80.6% to 79.7%.

HIGH IMPACT

Not like for like

Rounds 1 and 2 were context-informed and Round 3 was mostly blind, so the rounds are not directly comparable.

MEDIUM

Voided questions

Removing 63 defective or unresolvable questions changes which calls are scored.

LOW

One pending call

R3-208 is still to be marked and cannot move the Round 3 rate by more than half a point.

311

SECTION

ANNEX

NOTES AND METHOD

How this was done. Each round's questions, probabilities and reasons were sealed with a hash before resolution, and the sealed packs are the only source for every figure in this report. Every resolved call was marked against a named public source, with the value, link and date read recorded. Hit rates exclude void and pending calls, and a probability of 50% or more counts as a yes call. Brier scores are the mean squared gap between probability and outcome across every scored call with a probability. All rates were recomputed from the per-question record for this report, checked against the round scorecards and re-derived by an independent check. This is analysis for decision-makers, not investment or legal advice.

ASSUMPTIONS AND CAVEATS

This section states, in full, the assumptions the findings rest on, where the market lines were drawn, the limits of the evidence base, and where the findings are genuinely unresolved — so the reader can assess the conclusions independently. Any sub-section with nothing material to declare says so.

AREAS OF UNCERTAINTY

- One Round 3 question, R3-208, is pending. Either result would move the Round 3 hit rate by less than half a point.
- Several market marks rely on secondary price sources that can differ slightly from official settlements.

MARKET-BOUNDARY DECISIONS

- This report covers Rounds 1 to 3 only. Rounds 4 to 6 are sealed and unmarked.
- Rounds 1 and 2 were context-informed. Round 3 is the first blind test, with 288 of its 300 questions written blind.

SIGNIFICANT ASSUMPTIONS

- Where a paid data terminal was named as the source, a reputable public source for the same figure was used instead.
- Questions with a 'by' date and no start date were read as covering the round window.

SOURCE LIMITATIONS

- Each round has been marked once in full. A second, independent marking of every call is still owed.
- In Round 2, a partial second marking of 27 calls changed 5, which would move the hit rate from 80.6% to 79.7%. Calls the second marker could not resolve keep the first mark.
- Round 1 was rebuilt from its result ledger. Its hard-source figure of 75.0% comes from the scorecard and cannot be re-derived from the ledger alone.

- Thirteen Round 3 marks first made on 14 October 2026 were not preserved. They were marked again from source on 21 October, and the result matched the 14 October record.

TRUST BANDS

PRIMARY

Original / authoritative source.

CORROBORATED

Confirmed from 2+ independent sources.

SINGLE-SOURCE

One source, uncorroborated — hold lightly.

UNVERIFIED

Authenticity or accuracy in question — treat with caution.

FORESIGHT

311 projection / inference — labelled, not fact.

SOURCE LEDGER

The report's headline figures, each traced to its origin, dated and tiered, with the full per-claim ledger shipping in the companion data.

TERMS & CONDITIONS

This report is published by the 311 Institute for information only. It is made available to clients and to the general public alike, and is not advice of any kind.

No advice. Nothing in this report constitutes legal, financial, investment, tax or other professional advice, nor any recommendation, offer or solicitation to buy, sell or hold any security, instrument or asset, and it takes no account of any reader's particular circumstances. Any action taken on the basis of this report is taken entirely at the reader's own risk, and independent professional advice should be obtained before acting.

Foresight, not fact. This report contains analysis, scenarios and forward-looking judgements about uncertain futures. Projections, ranges and scenarios are informed estimates, not statements of fact or guarantees, and actual events may differ materially. Forward-looking statements speak only as at the date of publication and are not updated.

No liability. To the fullest extent permitted by law, the 311 Institute, its founder Matthew Griffin, and their officers, employees, agents and associates accept no liability of any kind — whether in contract, tort (including negligence), for misrepresentation, or otherwise — for any loss or damage whatsoever (including direct, indirect, special, consequential or economic loss) arising from any use of, or reliance on, this report or its contents by any person, whether a client or a member of the public. No representation or warranty, express or implied, is given as to the report's accuracy, completeness, currency or fitness for any purpose. Nothing in these terms excludes any liability that cannot be excluded by law.

Reproduction and intellectual property. All content, frameworks, methods and marks in this report are the property of the 311 Institute and its licensors. No part of this report may be reproduced, copied, stored, distributed, published or otherwise used, in whole or in part, without the prior written permission of the 311 Institute. Third-party names, standards, products and marks are the property of their respective owners and are used for identification only.

Governing law. These terms, and any dispute or claim arising out of or in connection with them or this report, are governed by the law of England and are subject to the exclusive jurisdiction of the English courts. © 2026 311 Institute. All rights reserved.
